

The LUVV

1.)

Various kinds of animals had developed through the process of natural selection, also which can be referred to as being filtered through which you might also know as a power of nature. So did the supreme kind, humans. Undergoing massive congestion of varying surrounding ecosystems, humans evolved to express through innumerable geological climates. To surpass their biological limitations, which were unknown if they were not tested at all, they started to make infinite impetus. Doing so, humankind started to thrive to reach the end of the universe as if there were nothing able to stand against them. Transcending the wall of speed and loading as years go by, ubiquity became one keyword that stands for the easiness to have access to objects made with basic, or even invaluable material. As years go by, _____ has a growing position over the world. It does no doubt to say that our prosperity is conducted by the fascinating development of technologies to locate prevalently.

- 1) communication
- 2) transportation
- 3) morality
- 4) equality
- 5) education

2.)

It is a common observation that malevolent individuals often display a self-defensive attitude toward others. Paradoxically, this attitude tends to capture and address any sort of irrelevant behavior in a degree of massively sensitive state. However, despite their self-protective demeanor, they long for emotional and intellectual relationships with others that would describe the phrase "paradoxical". To understand the paradoxical behavior of such individuals, it is essential to recognize the underlying intention behind their actions. By doing so, we can manage to have a much more cooperative connection with them. The truth about their behavior might be utilized as a means of knowing their unpleasant-looking attitude's intention beforehand, resulting in a better understanding of their needs and motivations. However, revealing too much of our intentions can potentially harm the interpersonal correlation, in case we are caught that we have undefined intentions in our underlying motivations to show off the _____ purpose of our approach to others. This tendency can lead to skepticism on the part of the other individual -or both, those who may feel that we should have provided them with the fact or kept it hidden in our minds without letting them discover it. For maintaining firm standings with malevolent individuals, it is better to keep our underlying motivations hidden. Having them unconscious of our fundamental purpose would fit in the ultimate relationship-keeping method since this approach ensures relationship relies on trust and mutual respect.

- 1) mind-blowing
- 2) multifaceted
- 3) authenticated
- 4) correlated
- 5) similar

3.)

Unfolding knowledgeable individual experts' chance to gather around with equal people of equal positions and take the possibility of success in societal aspect is what to be conducted with a process of so-called decision making discourse. According to Jurgen Habermas, he discussed that the point of people gathering around and talking about the shared problem isn't that it should be in the malignant cycle that causes each participant's idea to be perceived as defective rather recognize it as it truly is but with the benign cycle of conversations provided by sufficient acknowledgments and _____ . Their reasoning in varied options and materials about your contention would lead them to nod to your statements as it gives legitimacy to your opinions. Though individuals are experts in where they belong and versatile they might be in common cases, it depends on whether they have productive methods and healthy ideas while having controversy to make wise choices proportionate to their sum of knowledge.

- 1) supporting reasons that are commonly plausible
- 2) active engagements in controversial issue
- 3) wise statements to be addressed by numerous individuals
- 4) approval of their abilities to take it easily
- 5) improvement overall in those timescales

4.)

Refined comments about the status quo might be the one key to sorting out adequate avenues to search out for the way that will eventually find out answers while it might also be a cause of misunderstanding among other stakeholders in case of an agreement to is signed. Put easily, though mind-blowing it could be that there are no reported errors above all kinds of aspects, the truth would rather be the fact that there must be an undiscovered hindrance at least one (that could be the data-processing error or a person who missed out placing data) in your group. Settling the work-space environment in peace with no cautious problems would entail misunderstanding how to address the errors you've got undiscovered yet. _____ judging of the current situation might be the thin edge of a wedge since it will get you in big trouble once it gets impossible to take it back.

- 1) Unexpected
- 2) Miscalculated
- 3) Logical
- 4) Intimidating
- 5) Rational

5.)

Giving birth to an infinite impetus - which might be best referred to as technology - was conducted by us. Starting from the Industrial Revolution, humankind started to make various machines to be served for an endless easiness and take a seat for a while to have some rest in busy everyday life. In the case of this expression, since then, there was no _____. Taking over places where humans had to be, machines were rather trustworthy than to be having numerous problems. Having a much more sophisticated process of making products, processing much faster with almost no defects, and working for a much cheaper cost (or none at all) was what to be called the most advantageous aspect of machines - or technologies. As years pass by, starting with those who cannot live without cutting-edge technology, it started to show off those who are overwhelmed by scientific development to behave as passive agents of technology. The problem of taking a self-indulgent attitude has risen above the surface.

- 1) Freedom to choose by their own will
- 2) Leeway to pass through massive industrial systems
- 3) Passive agent who only seeks for cutting-edge knowledge
- 4) Single person who gives attention to scientific development
- 5) Common goal for making another impetus at all

6.)

A vast majority of customers would have to choose whether they will be active agents or passive bystanders of companies which creates increasing pressure without even making you recognize the importance of being where you wanted them to be but suddenly appears to be essential to choose their commodities by advertising to specific targets with innumerable pieces of information of each collected by big data to start a chain reaction to let it become a flare to the incremental net profits. Depending on big data, lots of companies can provide sets of advertisements to show their main customers that they have numerous products to fill their customers' gaps between the ideal and reality of their options for choosing one, specific type of goods in massive markets of industries by showing countless options with their own company's products not just by forcing them to select but with the smooth approach to give them options which are free to choose. To show the fact that they have a significant difference from other types of companies to make sure that people will choose theirs, they will be trying to _____ guests to show that the trend toward their merchandise is inevitable not just by giving them trust but also by what so-called "branding" which is a work accomplished not just by happening but by surpassing their limits -which is not created by themselves but by other rivals- with such a long, distant time trying to make intriguing moments to be spread in forms of video that might be making trends in SNS (Social Network Service) to make it sure that they would have already given customers options.

- 1) fascinate
- 2) surrender
- 3) bypass
- 4) urge
- 5) rank

7.)

Gregarious moments made in the first meeting timescales often play a role of putting almost every each of stakeholders to get into friendliness to access to each other. Virtuous regulations might be in need, though, to prevent the danger of having violations over individuals' safety domain. Set for the least of _____ to have it ensured while others are approaching them, it should be taken as an undeniable fact that crossing over the bar might push them forward to fall in pits of uneasiness-which causes them to have much more aggressive-but self-defensive- attitude toward others. The case might be that when you are working while listening to music with earphones plugged in, might be a definite signal to others not to bother, but once it is taken off, it is fine. What if you couldn't manage others coming toward you to hand out additional sets of work? It would be frustrating to go much farther than the sign.

- 1) morality
- 2) probability
- 3) defence
- 4) chance
- 5) easiness

8.)

A multifaceted aspect of a single dimension in the case of the social fabric, namely, culture is what we can point out as compulsory, but also free will if we take in part of the lasting cycle of community with others who consist of rapidly changing communities. Mandatory education policy, simultaneously mounting socialization with a raft of so-called friends has profound assets to things we might be intrigued about in case we have to take social actions with others. Say, it's likely to be understood that to understand the point of a joke from a standard standpoint requires an acquisition of an equal level of education that we might have already experienced in childhood through the state of undergraduate. Believe it or not, the exact level of standing in the educational aspect doesn't have to be regarded as a(n) _____ at all, to the solution of being in utter confusion. Though massive educative theory might have been forced on individuals, communities with few gregarious friends and even others with seemingly inappropriate friends have different engagement levels but can perceive one joke with standardized regulations of the community without getting rid of it due to an ever-lasting communicative environment.

- 1) statement
- 2) narrative
- 3) prerequisite
- 4) virtue
- 5) agitation

9.)

The versatile individual making unambiguous improvements to the overall ambiance in the workspace is still an ongoing idea for a few scholars which might be referred to as an obsolete way of thinking by others. Though commensurate employees playing single games might be significant to provide a successful profit-making system, a collective structure can vest collective wisdom in a general environment - they say. In modern cases, pseudonymization or being in an anonymous state in a company's online community space can induce a chaotic network since it can make individuals assert novel ideas that might produce incremental net profit somewhen. Escalating those incorrect assertions to study in all its aspects, might be the problem of being educated in a group network for decades (in schools), putting one never by himself to be left out of the jungle. To remind, teachers calling students to settle problems given out as assignments have told us to make sure to have solutions in congregated form. In most cases, inducing disorder to lower efficiency was taken mostly in that environment. As well as the foregoing situation so is the company's environment.

- 1) Indecisive factors are widely produced by individual network
- 2) Rendering individual tactics to an overall structure is necessitated
- 3) Private sectors of secrecy is important in all cases
- 4) Mass psychology can produce wise answers above all
- 5) Generally produced atmosphere must be taken as an active agent

10.)

As the development of scientific research and other technological inventions took place, humankind started to desire for communicating with each other and search through the floods of information though both were in distant places. Pleasuring, or frustrating this fact can be. Since we started to join the era of the information-flooding system, nothing got much more important than the speed and the quality of data ever since the day early telephones began to be invented -which happened in 1861, by Philipp Reis. Nowadays, nothing can be taken credibly through highly-developed machines without using pieces of information of even such little variables. Instead of saying this unkind truth is making tremendous remarkable effects, it must be considered _____ without hesitation. Pieces of information taking place over such fields of aerospace science, biology, and countless other technologies, computing machines became what to be regarded as the crucial conductor of each developmental process. But not being an independent object, but is subject to a piece of information without making a subjective choice became a much more ambiguous factor to refer to as technological inventions a positive procedure. On the hidden side of what we praise for governments and scientists, there had been always side effects that we could have heard of -or not. We can hold the "One laptop per child" policy as an example, which led to a problem of equality to access to pieces of information that had been a constant topic of argument for many organizations. With one laptop per child, it could be much easier to have a more advanced education in school caused of the incremental level of each subject as technology grows. But without having sufficient aid from governments, schools had to be the actor for aid, which was also a problem for each school due to an immense amount of money.

- 1) compunctiously
- 2) skeptically
- 3) intrinsically
- 4) impediend
- 5) favorable

11.)

Ever since Korea was founded, there have always been religious or ideological influences that have helped govern the population, particularly within hierarchical structures. If a religion or ideology advocated for the freedom of its followers, it would not have been possible to quickly establish control over other regulatory conventions. Still, there are many vestiges of these ideological influences that can be found everywhere you go, even in your unconscious mind, particularly when you participate in group conversations. For example, in a workplace meeting, Koreans always ask about others' preferences for specific objects to ensure everyone's needs are met and maximize their chances of success, which reflects Confucian principles. In Buddhism, parents who want their child to succeed academically in the entrance exam for university often visit temples to make wishes and offer prayers. In modern times, the growing burden of managing one's mental health in the context of religious and ideological beliefs has become a primary concern, in contrast to previous centuries when governing a country with forceful methods was the primary concern. Nowadays while trying to have someplace to lean on, it is not a fact that it is a matter of the weak spirit of _____ though it was true for history overall.

- 1) concession
- 2) friendship
- 3) fellowship
- 4) independence
- 5) pity

12.)

Milestones set in the way of escalating bioscience research can be a remarkable triumph. However, research in the avenue of anti-humanity may reflect a status quo of unprecedented technological congestion, which highlights the need to address pressing issues related to humanity. Though it might be so convoluted for the public to be aware of minor details, it should be the fact that collective wisdom taking various aspects of the problem can make plausible (or reasonable) decisions to correct for already conducted mistakes and further future mistakes before it is about to happen. To put it in a concise term, it should be that there are lots of issues hidden in our technological evolution which contains such as experimenting on living humans that must be publicized to put a period. Tactics suggested by researchers longing for an endless, violative experiment might be well-hiding their wrong avenues of experiments by using skillful words that might cause us to allow and nod to their words without even recognizing them. Not only by publicizing it but we have to put forth a(n) _____ effort into solving that anti-humanity problem in ways such as publicizing and critically having public announcements or having multifaceted aspects of the problem though it might not be harnessed with newspaper or any other mass media.

- 1) initiative
- 2) regulatory
- 3) inclusive
- 4) unilateral
- 5) sudden

13.)

Indecisive figures becoming a hindrance to sensible conversations should be regarded as a decisive factor in the failure of the decision-making process. A director who looks solemn but has no idea about the current situation can cause a dramatic failure in group conversations and the opinions of others. However, it is not always about the head; sometimes it can be a problem for the body. While having a highly informative meeting with other teammates, there must be normative regulations in place before handling the team's common goal and having discussions on highly sensitive topics. Redundant issues that result in unhealthy arguments could be one minor matter, but eventually, they can escalate to a greater extent, causing enormous fights or other problems such as spending too much time making solutions to the current situation much more obscure or ambiguous. Not allowing any mistakes and taking over control of others could create confusion because vague comments have been made with no rules in place. Simply put, _____ others' decisions and opinions without any level of law for everyone might cause gigantic issues and mistakes without ever recognizing them.

- 1) congregating
- 2) manipulating
- 3) praising
- 4) diluting
- 5) weakening

14.)

During the 16th and 17th centuries, Europe experienced numerous technological inventions as a result of the rapid changes in their scientific environments by embracing various scientific innovations held in other countries, Europe began to invent massive experimental tools, leading to the promotion of development in the field of science. Francis Bacon advocated for the inductive method, while René Descartes advocated for deductive reasoning, resulting in numerous experiments being conducted according to the scientific mode of thinking. With the invention of the law of universal gravitation by Newton, it became possible to find out how the universe moves and explain it in a mathematical formula, establishing the mechanical aspect of the universe. As the 17th century progressed, the view on the world changed rapidly, and the scientific revolution began to prioritize reasonable thinking above all else, becoming a substructure of the philosophy of enlightenment. The promoted way of thinking by the scientific revolution could also be applied to understanding the formation of political powers and parties, leading eventually to the theory of social contract based on the philosophy of natural law. This philosophy points out that there are general, plausible principles of equity that exist in natural environments. John Locke asserted in the second treatise on government that citizens could revolt if the government governed the country inappropriately. Enlightenment theory was about how society could progress through humankind's rationality by getting rid of old conventions and myths. It influenced the crowd revolution because every individual, as the owner of rationality, should have the right to be free and equal and to criticize the absolute monarchy. Providing _____ principles to understand the way humans recruit others and making power of political aspect was in the collaboration with scientific development and the improvement of societal comprehension.

- 1) widespread
- 2) collective
- 3) unique
- 4) corresponding
- 5) integrated

15.)

The invention of a distant network -which can be referred to as the Internet- was the first step to advocating for the right to communication for every participant living in innumerable countries. Perceiving the internet as a tool for communicating and finding essential data, the floods became a trepidation to each individual but not in the size of a country or social institutions. From the view of social perspective, there were immense advantages to letting one monitor others' status quo and expect how to treat others in the next step. Not only belonging to discrete individuals or particular institutions and being commonplace was what could be the pro-side of the worldwide web. Taking the example of individuals, however, though there might be a chance to talk -or chat- with distant people or even in other countries, it became possible to be themselves in a deficient ethical state behind the property of the web spaces. Problems that had risen above the surface were especially that the internet was characterized by pseudonymization so being in a(n) _____ by being hidden in the barrier of nicknames and other obstacles. Compunction had no chance to be in each species in the internet world even though they conducted a tremendously offensive attack on others. The attackers happened to be in bond, while the victim had no place to lean on.

- 1) possibly unethical state while conversations
- 2) misunderstood state caused by text
- 3) emotionally wounded state by conversations
- 4) sensitive state with regulations spying on them
- 5) sentimental state caused by attacks on others

16.)

In the liminal time-space when we ought to prune some individualized aspect toward the whole society, those fetal spaces would have to be considered as the thin end of a wedge that could beget deserts -in a negative way- to their egoistic behavior or possibly, reward from collective behavior. Trying to crest the precipitous hill of society, each individual can be prone to act as a single participant with no consideration of others at all that might eventually ascribe themselves to no single kind of group at all. Impoverished society results from the _____ of individuals leading to the failure of the group. Others' devout reverence toward one particular person that usurps the chance of improvement in monetary aspects by letting each person give up their time can also lead to failure though it might be a catalyst to harmony.

- 1) segmentation
- 2) indulgence
- 3) amorality
- 4) diversity
- 5) transition

17.)

Poverty is a slowly emerging consequence of what is commonly known as a "practice," which refers to a social convention that the majority of individuals in society engage in. The contamination may occur gradually and appear to have no immediate negative effects, but it ultimately puts every stakeholder in a precarious state in the long run. The term "practice" is not related to culture or social convention but to economic circulation, which can become a vicious cycle. This cycle is subject to currency and monetary businesses that take place worldwide every second, affecting everyone's assets and financial well-being. In the face of economic stagnation, governing bodies must act _____ and decisively to prevent the depletion of citizens' valuable resources. If a vicious economic cycle takes hold, control towers must take measures to mitigate the damage. The more rapid far better, as prolonged inaction could result in dire consequences eventually leading to the congestion of worldwide currency.

- 1) swiftly
- 2) wisely
- 3) slowly
- 4) irresolutely
- 5) widely

18.)

The path to ultimate fulfillment lies in achieving self-realization, surpassing all other needs. By providing clients with a sense of accomplishment, sales figures can skyrocket. However, it is important for companies to not only share their knowledge but also learn from others through trade. Employing identical tactics to sell to a similar group of customers may cause hesitation, as it can blur each company's distinct qualities and lead them to fade away. Despite this, captivating customers and persuading them to buy products remains a challenge and even a dilemma. Instead of labeling massive copying and production as the key to sales success, companies should focus on _____ as the most critical factor. Having their discriminatory attribute to influence and distort customers' views of comparing others' and own property should be an immense work to be settled as it takes long-term vision to decipher and redistribute their focus to their products.

- 1) ingenuity
- 2) innovativeness
- 3) compatibility
- 4) capability
- 5) utility

19.)

Current situations of industry in so-called animation and other movies get an immense compulsion to make countless series of arrangements, caused by endless demands of watching their series and endless skyrocketing net profits as they make touching moments in a virtual world. To a large extent, which involves over-the-top service, or OTT service, started to invest in those cartoon based animations and such materials since they had a prediction of the future in which most of their followers would be taking part in the industry of animators by watching and responding to what they had seen. Not only watching and reviewing what they saw, they lead to a larger spectrum of their experiences being widened by gaming as well, eventually searching for the name of the pieces and downloading what corresponds to the piece. These kinds of _____ monetary businesses get involved with each other in the center of the follower's tastes.

- 1) competitive
- 2) intertwined
- 3) intriguing
- 4) revealed
- 5) presentive

20.)

One of the most rewarding aspects of critical thinking is the shortcut to sort out eligible paths to wise answers. Be aware of the truth in case you might not be able to apprehend how to certify your words that you shouldn't be willing to suppose others to applaud your statement no sooner as your words came out than you've let them understand in the way you ought in a sensible way which might be rather _____ than getting it without any hesitation. The role of criticizing now appears that in the aspect of being understood, the correlation between no hesitation and criticism is quite contrary that in ways to comprehend what the author had meant through those statements are not held by rescuing from the flood of information in simple ways by just letting them come out but with the helping them to grasp the clue of your words and reason it in plausible ways. Believe it or not, critical thinking is what to be an analytical way of understanding without thinking of it as a plausible thing in and of itself.

- 1) filtering
- 2) demonstrative
- 3) directive
- 4) strategic
- 5) acceptable

21.)

In the dreadful timescales, while we bear such regulatory devices like those so-called "laws" or other *contrivances, we ought to make judicious decisions to ensure ourselves be under the burden of societal legitimacy. Drastic changes in the current status of what to refer to as a wisely-decided resolution might be the key factor to our utter confusion and to finding the faulty facts of the higher positioned people in these modern eras -not only in modern cases but to say it was so in the early stages of enactment. This is not to say that it was due to the obsessed people who care for the safety of humankind, but to say that the fact is in case they have no standings at all in front of ordinaries and their families in the extent of the larger to the smaller. The gist you can get from this point is that the higher they get, the smaller they become. In these social atmospheres in which you can have access even with the tiny debris which were not able to get cautious for them to gather pieces to make it hidden from others, they are who make regulatory permissions to take control over every choice, but with small facts unconcealed because of tiny mistakes they made in subconscious state -possibly. The thing that rises above the surface in case the regulations get changed so fast would be able to let them fall down the pits within a few months or even much faster as it is widened to the extent of worldwide aspect. More people seeking the weak part of laws and the lawmakers' factors are making a big part of advantages to make much more obvious, and yet plausible laws that won't be changed so _____.

- 1) radically
- 2) unhurriedly
- 3) fundamentally
- 4) gorgeously
- 5) evidently

22.)

Although technological inventions have been used as a tool for approaching the integrated principle of the whole universe, paradoxically, it couldn't explain tiny scales such as what we are consisted of, and how we survived throughout the whole time in societal aspect; however the technologies progressed, it was impossible to present mechanisms of human cultures and other societal behaviors by some formula and other equations made by technologies. Until the previous modern days, it was clear that there exists an unambiguous partition between humans and technological inventions -such as computers, which turned out to be different since the advent of highly-developed Artificial Intelligence, or AI. Deeply consumed in every place where humans wanted their every assistant wanted to be, it became a(n) _____ factor to all humankind as it made them act as an agent that gets what their master needed. Currently accumulating databases of how each activity in a particular interaction, and the response would be considered as a prerequisite of their intellectual development of themselves, the ever-lasting information-receiving situation makes them themselves an unprecedented level of intelligence-seeking creatures.

- 1) non-essential
- 2) indispensable
- 3) marvelous
- 4) insignificant
- 5) trivial

23.)

The distinction between human and animal language lies in the fact that while animals can communicate their emotional or physical states through voice, gesture, or other signs, humans can express these feelings with greater precision and _____. For instance, humans can communicate not just that they are hungry, but also what they want to eat, and not just that they are afraid, but what they are afraid of though the idea wasn't common to each individual. This ability to use descriptive language is a significant factor that sets humans apart from other animals that might be only able to meet their needs just by hunting or even other unethical choices. The development of the vocal cords played a crucial role in this differentiation, allowing humans to articulate complex thoughts and ideas with much more precision and much higher accountability of their own words. However, with great power comes great responsibility, as every word spoken cannot be unsaid. While this expanded vocabulary enables humans to engage in more intricate conversations, it also increases the likelihood of misunderstandings and confusion.

- 1) responsibility
- 2) vulnerability
- 3) fragility
- 4) emotions
- 5) expertise

24.)

<Experts in antiquity used to be philosophers who had multiple jobs within their quite precise perspective of their version of the world where it wasn't free enough to have been stated for themselves - ordinary people.>

A) A bunch of research had been conducted, though, while others could have conformed to existing social pressure. Locating those informative words to make sets of newly-developed regulations, which the elderly had written became the first step.

B) Though it was inevitable to research decisive factors to address topics that had risen above the surface, it remained a struggle for them to explain their avenue of how to behave in the world of a compulsory atmosphere where monarchy was mainly the prerequisite of whole things. Having massive arguments and dictation about the ideal could have let the ideal be the game at last.

C) Since early modern philosophy started to be on its way, how to manage the previous realm could have become the answer to the version they had to inspect as precisely as possible, in all manners. Reconstructing the elder philosophy they had experienced with antique books, they tried to rediscover the answers the antiquity scholars couldn't find out.

- 1) (A)-(C)-(B)
- 2) (B)-(A)-(C)
- 3) (B)-(C)-(A)
- 4) (C)-(A)-(B)
- 5) (C)-(B)-(A)

25.)

<Communicative groups have a profound effect caused by accumulated small conversations while others who are not taking part have no options but to spend time indifferently with no idea of what kind of problems they are making. The wild process started, with those who have no personal statements, in most cases.>

A) Whether addressing various views toward a particular subject was what also that could be regarded as the main factor that decides the success and failure of the goal. Though the point is that there must be a careful point of view, paradoxically, sometimes it doesn't have to be the overall prerequisite.

B) Reasoning plausible ways to get the answer became what to be regarded as the most important factor overall, and you might notice that only a few people cared about others. To reason, open communicative places must be reserved, to eventually enhance the accountability of each others' opinions and to increase concern about how to help.

C) Useless, it might seem to be but creative it would be at last to point out those ideas. Rationally thinking about the topic might have some positive aspects, but simultaneously might oppose the effectiveness overall.

- 1) (A)-(C)-(B)
- 2) (B)-(A)-(C)
- 3) (B)-(C)-(A)
- 4) (C)-(A)-(B)
- 5) (C)-(B)-(A)

26.)

While exploring the intricate interplay between the ever-evolving digital landscape and the intricate workings of the human mind, a _____ examination of the immeasurable ways in which the internet -such as social media platforms- have exerted a persisting impact on the complex web of the mental realm concerns plaguing individuals of all ages and backgrounds is warranted. This is not the only fact that a complicated network of the digital system made us the bystander of rapidly changing binary surroundings but also the truth is that it is eventually staffed by numerous people who made them help lots of people accept the ubiquitous world much more easily. But in the case where elders or those who couldn't participate at all are passive agents of digital circumstances due to massively rapid changes happening, they would be their gaper of them as there is no leeway to pass through them with no influence at all. The double-edged sword would be that the positive side would give advantages to the whole of humankind while the few, but those who ought not to be removed from our interests.

- 1) fragmentary
- 2) unilateral
- 3) multifaceted
- 4) multi-functional
- 5) cautious

27.)

What if the doomsday of the world is not left so far but only to be in 3 days? What if every particular object's properties are gone in a few days? These kinds of imaginative thinking might be an impetus to drive you and others toward the ideal world where every property and the lovers won't be gone with security reserved everywhere and stable economics prevalent in the world. However, overall comprehension of reality might be the tool for pioneering the ideal world as well. The capacity to manage those two contrary subjects is what is known as a crucial point to handling the group's goal to let it "turns out to be true." In case you have one urgent situation to suffer from the fact that the unilateral way to think is the only thing you could do due to the scale of a group that might cause you to feel social pressure, you ought to know that the ideal is not that far from your imaginative thoughts and a practical way to reach the goal can be established from a calm analysis of the current situation. Put simply, the _____ view must be a handful of tools to gain the happy end of the game.

- 1) arrogant
- 2) conscious
- 3) assured
- 4) concise
- 5) compulsory

28.)

What causes one cycle to be virtuous or vicious in a societal, or economic aspect? In one's opinion, it is due to a few, particular groups of people manipulating the atmosphere and the causal relationship between small behaviors that might be the thin end of a wedge and enormous effects that turned out into a massive storm that started with a butterfly's flapping wings. It might be true overall, while it wouldn't be considered that it can fully cover the whole aspects. Most people assert that though there exists a few particular groups of people who are taking control over various extents of monetary businesses and exerting their power to be so-called "vultures" or those who take advantage of others' misfortune, we still could make much more improvements in case they lose strong control over others' money and have a passive influence on overall processes and results, to finish the vicious cycle and make a first step to be in the way of the virtuous cycle. The gist you can get from these statements is that there exists a few particular groups of people manipulating society and disrupting the whole effectiveness, _____, and the answer is to sabotage them conducting their underlying intentions to bring it out real.

- 1) radically
- 2) erroneously
- 3) enormously
- 4) wisely
- 5) exceptionally

29.)

Those who seek a wider range of perspectives and extremely objective views of their company, rather than only considering their immediate surroundings, are more likely to perceive their company as it truly is, with none or less particular views. By taking a more objective and critical approach, they can identify and address any flaws that might hinder the company's success no matter if it might be on the biggest scale above all because it would be able to be found out as fast as possible if they do so. While not everyone may have a preference for seeking external perspectives, it would be beneficial for those who do handle events with care and foresight. Even though the number of individuals seeking an outside perspective may be fewer, their impact on the company could be greater than having a larger number of individuals who lack objectivity and have much fewer pieces of information about the status quo, which leads them to misunderstand about the current situation, in extreme cases, which would lead them to have a massive storm in their future. Individuals who seek a broader range of perspectives and maintain objectivity towards their company are more likely to perceive it accurately, without any particular biases. By adopting a critical approach, they can identify and address any potential flaws that might impede the company's _____.

- 1) collapse
- 2) ideal
- 3) advancement
- 4) identity
- 5) uniqueness

30.)

The economic aspect of currency is a multifaceted issue that has a significant impact on various aspects of our daily lives. Currency is a medium of exchange for goods and services, and its value is determined by various factors such as supply and demand, interest rates, inflation rates, and government policies. Currency _____ can significantly impact a country's economy, affecting everything from the price of goods and services to employment levels and overall economic growth. A strong currency can have both positive and negative impacts. It can boost consumer purchasing power, attract foreign investment, and stimulate economic growth, but it can also make exports more expensive and harm domestic industries. Conversely, a weak currency can stimulate export-oriented industries and create employment opportunities, but it can also lead to higher inflation and reduced purchasing power for consumers. Governments and central banks must carefully manage currency to promote sustainable economic growth while minimizing negative impacts. A balanced approach is crucial to achieving this, and stable currency management can create employment opportunities and stimulate economic growth while mitigating the negative effects of currency fluctuations. The economic aspect of currency is a critical issue, and its impact on the economy requires continuous attention and management to achieve sustainable growth.

- 1) stabilizations
- 2) fluctuations
- 3) liquidities
- 4) firmness
- 5) independences

31.)

Ever since humankind had been prompted to get themselves used to follow regulatory rules, these silent guidelines made it easier to let ourselves have fewer troubles and though trouble took place, it made those things get solved faster than ever before when there were no principles at all, yet, it still makes some problems to get solved, but simultaneously, it makes spin-off problems. Making pervasive acknowledgment of changes in the law would be the eventual goal of progressing one's society, but with no societal agreement above all, it would be one primary cause of the failure in not only to process the law but also to have a(n) _____ in societal aspect. The congestion of society due to only the lowest getting no information heard would rather be terrifying to describe as though it makes not everyone, but rather most of them be separated from the form of social agreement, leading to the more firm standing of the social barrier, which would ultimately mean that the congestion of society, caused by misunderstanding of changes in laws or fewer people knowing what changed and what to be changed, would cause harmful influences such as much more inflexible movement of hierarchy, or say, the inequality of access to pieces of information.

- 1) successful dynamic movement
- 2) separate, non-flexible social atmosphere
- 3) inappropriate mood overall
- 4) unkind people roaming
- 5) much more easier communication

32.)

Manipulating individuals' hope for what they want to be in the future is what is perceived as a side-effect of public education, ultimately causing them to have a narrower view of choices as even it wouldn't be able to let them widely accept the genuine range of jobs. Indeed, the premise should be that educators ought to acknowledge that they would _____ that ensures their vision of their hopeful dreams, and that they would not let themselves feel that they are having defects to have success in accomplishing their jobs. A pessimistic view, overall, would be the dominant factor that dominates oneself to have a much narrower view of their future, which makes themselves have no choice but to stand against others' bits of advice and helpful criticism, eventually causing interpersonal relationships and to have his regretful mind prevalent in own mental realm. As oneself being protected by their hopes, society - or school - would rather have much more various ways to make each group work together as if they are one lively organism.

- 1) criticize for their hopeful future
- 2) not violate the safety domain
- 3) help students to play together
- 4) let students find answer in their worksheet
- 5) cause trouble in their mind

33.)

A marked contrast from past million years ago, humankind has developed to mesmerize others to make their statements have public confidence above all others' opinions. However, words cannot catch the advantages overall as it only describes factors with no chances to make others be part of their group at all -early humans would have said. What to be underlying is which can be pointed out as crowd psychology in case you have to make ordinaries to advocate for your standings, or, a political statement. In the case of early homo sapiens, they would not have been able to think of themselves as political creatures in and of themselves, acting as if they had no kind of groups to speak to. They wouldn't have been able to treat others as the dominant factor of their political standing, ultimately living on their own but with a group. However, in modern cases, this would not be a genuine fact as there are so many people trying to show themselves to each other to get votes and advantages over others. An easy example is a domino, modern humans who want to make others vote for themselves have to push down the smallest scale domino (one individual to be persuaded) first and postpone pushing down the biggest scale (most of them nodding to your words) at last, taking slow motion to have others follow my words. Our ability to _____ became a crucial factor to overall success in modern days, especially in political aspects.

- 1) make public opinion
- 2) persuade others to have communication
- 3) let others gather around to each groups
- 4) make others be passive bystander
- 5) communicate with each other

34.)

Researching the problematic mutual relationship between two huge communities, it turned out that with small or little threats by others, there would be damage to ordinary individuals only filtered about a few. Particular individuals being a game of cross-national conflict, though the governing groups might put it as a tiny debris of small matter, would cause an enormous effect eventually, making everyone not an active agent of each own's group but to be a passive bystander overall. Individuals having those influences might cause them to _____ to make themselves much more conservative, and closing their world as if there are only themselves (or their beloved ones) in their realm yet nobody can approach them since it might recall the pathetic, still ongoing, experience. Versatile individuals also might be involved in that case, letting themselves caught in their subconscious realm. That is how the country might lose its prodigies or phenomena with a small kind of friction that affect small people with tiny debris -they might say. As the matter rose above the surface, with the country trying not to be in charge of it, it became impossible to take it back so fast.

- 1) bring their impatient temper out
- 2) think rationally about external stimulation
- 3) have distorted perspectives of the world
- 4) exert their subconscious needs outside
- 5) think irrationally about internal stimulation

35.)

Trustful individuals, some might acknowledge in the gregarious timescales, but then came out to be an unnecessary truth, might somewhat provoke them to feel against others as they got their logical idea disrupted by having counterexamples. The reasoned base would be in everyone's mental domain, leading them to live within their cages with easiness though they wouldn't be able to perceive it as a hindrance. It would preferably be recognized as once to get outside, the emotional attack and aggressive tendency would come out. But in the extent of a wiser range, they would have to let their bars crossed as it might make them an active agent with no inaction in a case when they have to make critical decisions with unkind opposition, or crucial measurements should happen in the ongoing timescales even though they might be in a situation where others might force them to make a chance or a choice. Venturing outside their _____ might cause them to feel hostile and awkward to others at first, but would eventually be effective in pointing out problems and decisions as they would be widely opened to others.

- 1) preconceived notions
- 2) fluctuating biases
- 3) method of presenting their ideas
- 4) views used to point out mistakes
- 5) moral construction

36.)

Our embedded nature of us gets us to attempt to reconcile the need to accomplish our tasks with concern for the future. Shaping our form of the future would rather be need-provoking yet with concern as it would be anxious while simultaneously it would be hoping to make a goal in precision. Contributing to please ourselves, can be an impetus for us to establish what we long for. Needs for success to be met in a while is impossible, as success makes us take it in a wider, and longer perspective. On the other hand, being incapable of having a much longer-term vision might perceive the goals always have to be in short-term timescales, while it would not contain an effective vision as well. A bigger perspective, which is a marked contrast from other short-term visions, which involves aspiration to take control over others, can make hopeful motivations, and also can be referred to as an impetus, as a powerful motivator for setting and achieving goals. Primarily, we should be aware of the fact that we should be able to _____ our desires with our aspirations.

- 1) value
- 2) encourage
- 3) arrange
- 4) balance
- 5) stimulate

37.)

Social infrastructures that encourage us to direct our creativity towards productivity in an active state have become possible due to correlated problems faced by society. In the past, there was no chance at all to develop one's hopes and make them helpful to everyone, but today, governing groups consider themselves a substructure for public inventiveness. The expansion of possibility and the realm of creativity took place through the progression of scientific technologies, maximizing the potential of individuals' utility and their unparalleled ideas to be realized. It was possible not only with unilateral support but also through multilateral cooperation with aid from patronage groups and individuals' passionate action. An astronomical amount of patronage provided to unique individuals made them work as if there were nothing possible to block their way, leading them to focus more yet with a wide range of ingenuity. To point out, the advancement of a stage full of creativity and uniqueness could be the result of _____ efforts with a trustworthy overall background, which is a marked contrast from the past.

- 1) harmonious
- 2) concerted
- 3) various
- 4) unilateral
- 5) congruent

38.)

Current societal views of success may appear inappropriate or corrupted compared to earlier developments where the longing for a successful life in a society is centered on integrity and the accomplishment of one's hopes, with monetary aspects being secondary. The fundamental purpose of assuming oneself to have a well-constructed life was to establish a reputation for integrity in pursuing their goals. However, people have learned to measure success solely by the amount of income earned, forgetting the initial purpose, which ordinary people find pitiful. Despite failing many times, people have resigned themselves to measuring their success with capital and materialistic components to maintain their will _____. Ultimately, people's desire for individual success from a capitalistic point of view has been a decisive factor in the rise of materialism. People who regarded themselves as the active agent of their dreams, longing for the realization of their desires, turned out they had found out that they had hoped for materialistic success after all. It is contradictory to find the opening motivations when you have achieved or failed your wishes as they have already undergone so many confusing situations to corrupt your hopes.

- 1) in the face of adversity
- 2) in miserable situation
- 3) in case of negative consequences
- 4) in rapid changes
- 5) in multifaceted realization

39.)

Throughout human history, there have been several reasons leading people to distrust each other in interpersonal relationships. When individuals encounter difficulties in their relationships, it can lead to fewer standings or weaker connections. One potential reason for distrust is the reminder of past mistakes made during vulnerable moments in the relationship. Another reason why people may struggle with interpersonal relationships is due to the subconscious effects of previous experiences, as the past empowers cumulative experiences to be decisive factors. This can lead to a challenge to establish trust or build strong relationships. Finally, if one party believes the other is incapable of making a plausible point or has underlying intentions, they may make an irrational decision, with impulsive behaviors. These decisions can further damage the relationship, leading to a cycle of distrust that is nearly impossible to break. There are several reasons why people may struggle with interpersonal relationships, _____ . To build stronger relationships, individuals must work to recognize and overcome these challenges, fostering open communication and building trust over time.

- 1) in case of showing contradictory standings
- 2) in the ordered timescale from the past
- 3) in the context of cumulated standings and notions
- 4) in the realm of underlying intentions
- 5) in the cycle of the past experiences

40.)

Elements that are a result of the progression of scientific development have a negative side above all. Modern public education theory that stems from scientific advancement might undermine interpersonal relationships in a wide range. Public education takes focus on the overall technical development of society, additionally tempting to make tactics of solitary to have success in society using custom-made avenues, with no groups or those that consist of multiple people. Rather than centering on a common goal to be established by multiple students or people with multifaceted views, governing groups might take control over each participant's behaviors to let themselves work discretely. Not only does an example of public education indicate _____ generally, but also the technical development of communication, such as online chatting, has risen above the surface. Preferring to use much shorter phrases can become detrimental to interpretation ability, decrease the level of understanding in the longer terms, and ultimately create shorter communication timescales with others, causing the spirit of self-reliance to settle in the societal atmosphere. With less ability to interpret, there are also issues about the misunderstanding that can let each other have much farther distances.

- 1) collectivism
- 2) hierarchism
- 3) communalism
- 4) individualism
- 5) personalism

41.)

Our impulses to react to visible objects or situations are interactive with our past experiences. Through troubles and various events, impulsive behaviors with no relevant thinking are related to our cumulative experience. Visible or auditory stimulation could be influenced by our domain of historical events, directly influencing whether we perceive it as a cordial situation to interpret as an indifferent material or a cacophony to react as sensitively as possible to effectively sense the situation overall. If our past experiences lead us to interpret current stimuli as positive or neutral, we would feel at ease and have a sense of safety as the current might be thought of as a connective thread from the past, with overlooking sense of advancement. On the other hand, if the status quo is perceived to violate our accumulated wisdom, we would panic and try to make sense of both our surroundings and the past ones to find out much more fundamental changes in our perspective to improvement. When our way of interpreting matters is threatened, violations can have a pessimistic side as they can make us feel trapped and ultimately limit our ability to see new, and integral opportunities. This defensiveness can lead to _____.

- 1) make us feel that safety is ensured
- 2) missed opportunities for growth
- 3) let us feel free for our behaviors
- 4) stimulation to be systematically interpreted
- 5) massive filtering of possible chances

42.)

Life, which is given, not just happened, has to be seen as holy, in awe, yet friendly, with morality. Humans developed to form clusters to let them survive through hard times, such as being chased by predators often, being drowned by massive floods, etc. While living in the form of a town, people tried to enrich themselves abundantly by having redundant grains, allowing them to trade with others. With ensured financial safety, they tried to find instant hedonism that can fulfill newly developed gaps that are a result of being filled with their money. From an individual aspect, they are likely to feel that it won't harm people as they are persecuting themselves in a harmful state. Having less keen judgment, they put themselves in a detrimental state, which might cause them to have lesser productivity above all other times they tried to make themselves work. Not only having much slower judgment, but they might also lose their definition of life as they might not find a single reason to live except for fulfilling the prompt desire. To a larger extent, with a societal view where it pursues utilitarianism above all other aspects, they might consider that individuals who are refraining themselves from pleasure-seeking surroundings might be a rather harmful factor than regarded as a reusable item. Having lesser growth every year, the expansion of crime rate and the segmentation of communities becoming increasingly widespread to affect national power would become the case if individuals only seek _____.

- 1) hasty gratification
- 2) immediate persecution
- 3) cluster to gather around
- 4) partners to achieve success
- 5) programmed desires

43.)

The difference between motivations and consolation can be better understood by considering questions such as what is better for individuals: comfort from a psychological aspect or achievement from a social perspective. Interactive play of psychologically intertwined communication might provide solace and improve psychological stability, while societal interaction with others might provide the foundation for future success with open but shallow relationships. Humans have developed behaviors that seek to answer whether they would have a healthier emotional state if they get psychological stabilizations or motivations with remarkable accomplishments. As things are constantly changing with different surroundings, it is crucial to employ different tactics to stabilize oneself. For example, if a few friends have a conflict, they may need emotional comfort to heal and focus on others. On the other hand, if one of them becomes the vice president of the class, they may feel motivated by societal success. Rendering oneself with _____ options in instantly changing surroundings is what to be regarded as the critical point of comforting oneself.

- 1) stabilized
- 2) compulsory
- 3) satisfactory
- 4) differentiated
- 5) motivating

44.)

Redundant issues hanging on the barrier of social hierarchism are playing a massive role in putting societal satisfaction in the lowest figure as it might harness the avenue of compulsory policies since ordinaries have no option but to conform to governmental suggestions. With few people asserting that there is no room for such problems as the societal boundary, ignorance of the alarming status of society got spread widely, which made most people not perceive the reality of people being ordered vertically according to their status, authority, power, or importance. To a range of extent, individuals playing as active agents in eliminating those vertical behaviors became a rising issue. As every individual is a critical participant in forming the societal perspective of others, each individual has the burden of discerning _____ of all individuals to have those corrupted practices abolished. To a common extent, the prevalence of social hierarchism is a significant hindrance to the formation of a fair and reappable society, which leads people to feel that they have much more incentives and motivations to work, teach, direct, and so on. By working together for a move of level positioning, there is no doubt it would be the new impetus for newly-developed, yet adopting the old's positive ones society.

- 1) what to be deemed as intruding on the horizontal equalism
- 2) what to be seemingly eradicating common sense
- 3) what to be rather considered reappable
- 4) what to be considered neutral to have incentives
- 5) what to be making individuals to be motivated

45.)

Among the integral complexities of contemporary society, it seems to be increasingly challenging to discern the true nature of individual communication-agency causing the benign, or vicious impact on the collective consciousness. Vast, yet the depth of communications take place simultaneously regarding societal wisdom. The convoluted dynamics of modern days present daunting challenges for us to increasingly depend on the temporary resource -that might be considered paramount, only for the time. When transitory importance seems to have hit the top spot on each individual's mind, it would be one key factor for repeating another new vicious cycle of interpersonal communication, causing them to have less influence on each other. It can be specifying the _____, which seemingly has no factor intruding on the relative efficiency of communicating tool, while it might be inducing the newly generated complexity of convolution.

- 1) vicious mutual relationship
- 2) method of malignant communication
- 3) corroboration of mutual confusion
- 4) confusion harnessing waste of time
- 5) paramount effect of using gestures

46.)

Widespread scientific knowledge should be seen as a conscious viewpoint that occupies the highest place in our minds. However, how an external stimulus is addressed may be misguided, whether through ideology or religion, leading the public to become ignorant and fall into a blindfolded state again. Mesmerizing ideals and conventions used by elders to defend their positions on what should be changed can be a multifaceted problem. They may have a good position, but they also risk _____. Elders, who possibly have much more knowledge about natural beings, developed their so-called inventions based on scientific reasoning, making another leeway for setbacks and letting opponents - still the same humankind - backfire on what they had advanced. Nowadays, technologies built on science have much more negative distortion, since they appear to drive toward the end of an era, with an infinite impetus, inducing excessive manipulation of resources. To stop this malignant repetition, individuals who have critical perspectives on societal issues, associated with scientific innovations, are expected to help us develop wisely by manifesting our society's wrong views and reconsidering new facts, even if they seem unkind at first.

- 1) themselves getting on the collapsing society
- 2) perpetuating a vicious cycle
- 3) maintaining what they had been doing
- 4) civilizing their cultures to a wider extent
- 5) longing for a malignant cycle

47.)

Perceiving oneself as a custom-made product for every individual is a significant factor that can lead to psychological damage without any external stimuli. Some may claim that they do not have sufficient time for themselves due to living in an era of excessively dense surroundings, which makes it difficult for others to be in their mental realm. However, some individuals are constantly working but still manage to be benevolent to others and what they might say in a massive environment that is too much to handle in their minds. As a result, some individuals' minds may not have additional capacity, leading to prolonged disorders caused by endless, seemingly meaningless conversations that can provoke infinite problems in their relationships. In the context of a pandemic disease such as COVID-19, we all faced challenging situations but still managed to have some time to think about ourselves to reorder with the help of national policies. The interaction between relationships and modern life can be confusing and difficult to manage, and each individual might need relevant time to support themselves. To maintain a practical yet _____ in your mind and surpass outer stimuli, it is essential to have more time alone or to choose to work and visit meeting environments that are not oppressive, with no complicated interactions.

- 1) unmethodical structure
- 2) systematic arrangement
- 3) decisive attitude
- 4) benign envy
- 5) skyrocketing morality

48.)

The vast array of job options proposed by controlling entities, available in every corner, provide us with numerous choices and limitless possibilities. However, it remains unknown who has confined us to this limited frame despite having the liberty to choose what we desire. In the early stages, when we first grasped the concept of a job, our innocent and pure voices were heard until we were taught how to respond to others' inquiries about our career aspirations. Oftentimes, we struggle to bridge the gap between what others expect of us and our reality, which diminishes our appreciation for their advice and guidance. When we eventually realize that we have no choice but to leave our current job, panic sets in, and we search for new opportunities that meet our standards. Despite job options being abundant globally, when someone asks, "How many jobs do you know?", we tend to list them off, despite being confined to a rigid frame, unwittingly _____ this limited perspective to others.

- 1) perpetuating
- 2) compelling
- 3) presenting
- 4) ending
- 5) sorting

49.)

To dismiss overlooked biases, reconsider stakeholders as if they were in the dominant causal relationship. Stereotypes in our subconscious may have undergone repetition through mass behavior. To correct societal errors, consider the interaction of scientific research that reveals new facts. Seek out mistakes that disrupt mutual interconnection before inducing extensive, irresistible phenomena. As political creatures following Aristotle's theory, we should seek critical factors that maintain ultimate balance. Addressing the problems of the general group can be challenging, as it might make us feel like outsiders. However, we must search for relevant and deep avenues to address the mistakes we have made, as this would make the collective wisdom of the overall group more aligned with objective views of themselves and others. Considering the psychological balance of individuals' aspects might lead each participant to remain in reassuring collective wisdom, regardless of whether it aligns with reality, ultimately leading to implausible states and a dismissive view of scientific research or certified aspects, inducing ineffective behaviors. Encouraging _____ minds in the group can help individuals develop objective perspectives rather than sentimental states.

- 1) conservative
- 2) sufficient
- 3) pioneering
- 4) sentimental
- 5) interconnected

50.)

In the guidance of fortunate events, each being is prone to have errors of the logical frame as it might appear them to have successfully covered the addressed problems, which might be eventually harmful to harness the inequality of fortunes since those are just ones that are relevant to the timeline that events took place. Relieved, with few illogical affairs, _____ their frames would put themselves to have much disarranged principles of how to act and foresee. Unavailable of reasoning, each public would be led to misadvice in the long run, causing them to relinquish the proper method of rational thinking. Manipulating the situations to join the previous events, they would put the current mistakes to the happening, without perceiving their ignorance of ignorant states, which are readily applicable to another new events that might not be proportionate to their luckily situations. To the extent of technological aspects, they would be likely to feel the happening of shown possibility to the ultimate, yet imperative thing to consider when they have to make another choices.

- 1) ignoring
- 2) maximizing
- 3) ensuring
- 4) pruning
- 5) generating

51.)

Those who have no idea of how to manage themselves to handle the given problems that go beyond their capacity would be likely to insist that _____ forms of communication might be the best method to address complex problems with a complicated causal relationship, besides the reality that they won't be able to have multiple avenues to control the problem except for the meaningless arguments. Complex problems that ought to be thinking possible consequences might be confusing and make the groups' standings much less than each individual's sum of abilities as they would have problems as mentioned. In the case of having multifaceted problems, they should be able to think much more precisely than any other simple problems. In terms of the word 'precisely' should be able to address much more complicated subsequent results as it might appear them to have accountability for what they had asserted, provoking them to have a much lesser possibility to claim for what they might consider as the resolution of the problem. The answer might be to have individuals work by themselves, to reduce the dilemma of problem-solving processes.

- 1) congregated
- 2) individual
- 3) precise
- 4) isolated
- 5) separated

52.)

Manuals used to play significant roles in addressing external influences, leading society to have much more formal ways to manage problems, as they would make clear actions. Nowadays, when every part of society is conducting massively complicated phenomena to make us relinquish the way we used to handle them, we are being passive agents to those external stimuli. In these cases, adaptation might play a crucial role, as the original ways to concern with given environments would not be able to fully cover the handed situation overall. Though it might seem inappropriate for the problems and possibly lead individuals to have ineffective consequences, it would ultimately put them in a position to have much more practical and confident resolutions. Manuals are those that have no options but to follow, making each public conform to the unwritten rules, which might also be referred to as a convention. Considering the manuals and practices as a level position would make us have a much more negative perspective on having those to put in our decision-making processes, while each individual might have already applied their forms. To have many visions far beyond the current given situations, they ought to have _____.

- 1) much conservative visions of their conventions
- 2) critical views on those manuals overall
- 3) their manuals corrected by the externals
- 4) much more complicated views on the problems
- 5) objective views on the outer problems

53.)

Musical instruments are massively playing, or listening to music has a chance to make us much more balanced with our emotions, as it can make us sentimental when we have to think much more critically about ourselves. Balancing between those two would be able to tell that it would be so challenging as two contrasting emotions to be in our head at the same time. When listening to music, we might have extensive aspects since it leads to another feature of the current situation, which leads us to have subjective views. Having a much broader, yet profound point of view, might put us in our mental realm with much more to consider about reality in our form, than when we are not listening to chords, to make us closer to our real emotions, regardless of how the actuality goes. With these emotions, we might have more remote perspectives as we would have discovered how to perceive the situation in our way. Music, which might help us to have another frame of reference for reality, simultaneously _____ reality.

- 1) condenses
- 2) reminds
- 3) distorts
- 4) extends
- 5) keeps

54.)

Luxurious extravagances, which might be a multifaceted problem, should be addressed in various aspects as it is not a single task that can be handled. In an individual aspect, since it can be another motivation, it might play the role of incentives to work and aspire for better products. In the case of obtaining those extravagant products, it would make a vicious cycle as a byproduct since it would make our fortunes to be dissipated, leading us to be frustrated to see the reality, which might best describe the term 'vicious cycle.' From a societal aspect, the increase in consumption would make much better economical stances while it would make them have a much wider gap between the rich and the poor. Making participants have extravagance-oriented minds would make them seek short-term incomes to spend than put it in a matter of an extensive vision. Except for the economical aspect, it would also put a matter of environmental aspect above the surface as what people seek would be the term 'extravagance' which covers why it became the problem in and of itself. Overall, extravagances are _____ as they might make various problems while provoking another impetus.

- 1) inevitable
- 2) unambiguous
- 3) benign
- 4) ambivalent
- 5) insignificant

55.)

To the extent of the sum of the units' expectations, the group is less likely to make a result proportionate to their beliefs, which might foster them to have resultant fear of co-working in a group. Several reasons might explain this. Above all, without objective judgment of how the group is currently, each independent can have the error of expecting much higher states since they have no idea about how to ensure themselves about the exact level of the group. In addition, playing own ideas independently without the effort to create a harmonious atmosphere in a congesting situation could be another factor that might lead to eventual unpleasantness, since it would be a meaningless effort to make a plausible point with nonsensical arguments. To exit the vicious cycle of expecting much higher and having lower outcomes and being placed in situations of their needs are unmet, individuals must be aware of the truth that they have to consider about the exact position of the group and make their expectations decreased to prevent disappointments when they have excessive arguments to diverge with each other. Instead of making their beliefs to be considered imperative, which might be compelling others to stand against them, providing their own beliefs with logical devices and therefore meeting the ultimate collective expectations would be much better, also, pushing themselves to hear what others are talking about must be key to _____.

- 1) providing much precise composition of the group
- 2) examining individuals if they have different points
- 3) making their needs met
- 4) pushing themselves to have much plausible opinions
- 5) communicate in congregated forms

56.)

Purchasing a product, people tend to choose options prevalent in their society, regarding the danger of not choosing those choices that others would not choose. Not doing so would make them feel remote from the societal atmosphere and lead to shallower bonds with the rest, while others integrated into one or a few particular products. If society is suffused with certain moods and options, independent thinkers may not gather around, inducing them to have no chance of forming _____. The term 'trend' accurately describes collective choices and suggests the concept of people being more united. Having uniform options to make a choice would foster fellowship with others, balancing individual and societal aspects, with individuals subordinated to the societal. Making collective choices would extend individuals' particular domains and connect them to the extensive societal ground. Choosing what others have chosen would help individuals provided with a sense of safety from being ruled out from general society. Provoking people to opt for what others had chosen would enhance economic fluidity, as consumption rates would increase, with trendy products pervasive in the overall societal atmosphere.

- 1) uniformity
- 2) conformity
- 3) diversity
- 4) individuality
- 5) particularity

57.)

Despite independents going much different compared to the collective ideals, still, they seek what might be the _____ choice, yet efficient for the group's vision to ensure their own expected domain is safe. Having different ideals could diverge them to get off the group's train, simultaneously counting on the collective wisdom to resolve the problems they have faced. Regardless of the fact in case they have consolidated their own opinions to turn off the aggregated switch, they would still have to cooperate for the common goal, if they had not gotten off the train yet. With a positive cycle taking place, it would preferably make individuals go within the mutual road, usurping the chance of individuals impeding the collective goal. In the compelling situation of the group, individuals would rather seek the sub-optimal option than insist on their ways.

- 1) utmost
- 2) minimal
- 3) individual
- 4) fatal
- 5) inventive

58.)

A humble position in a relationship is considered a significant factor that plays a role in providing others with a sense of humanity and bond. Being humble places one in a higher position, allowing one to try and help others. Not only does this promote the chance of successfully achieving common goals or solving problems, but also it provides a sense of _____, as being humble helps to maintain a positive relationship based on caring for each other. The first step, which refers to having oneself in a lower position than others, in achieving a common subject is crucial, as it provides a firm foundation for addressing problems, even if the faced problems may cause misunderstandings. With humble communication, participants in a humble, yet respectful relationship have a greater chance of achieving common goals with ensured mutual relationship.

- 1) diversity
- 2) individuality
- 3) security
- 4) secrecy
- 5) collectivity

59.)

Considering others to have hidden their ability to manage a few complex problems in and of itself would be key to having misunderstood them and inducing them to distrust one another, which means a vicious cycle to be stood firm. Though malignant repetition gets people to stand against each other as it draws individuals to be an opponent to others, having integrity about how the problem would get solved and further information about the issue would cause both to have less chance of misunderstanding and to have a benign cycle to be started. In the benign cycle, each would have higher chances of having constant feedbacks. All possible views with every participant's ideas displayed on the concern to be addressed would likely bring the possibility of _____ to the surface, promoting each other to be a crucial part of their further choices. Put simply, rather than have the possibility to make the problem much easier, it would be much more promising to have their capacity to be open to each other.

1. making oneself promising
2. repeating the negative cycles
3. inducing new problems
4. mutual cooperative thinking
5. another new range of choices

60.)

Constructing a fundamental method of considering other possible factors would be a new stimulus as it would induce one to have a range of vision to put the problem in the multifaceted table, promising oneself to have much more chance of prompting the issue to be solved wisely. How, would be a critical aspect, if we get to be aware of the fact about the method to support empowering a higher possibility to increase the level of discerning the virtual way of accomplishing the perspective of broad, yet immersed vision to take place about addressing the problem in and of itself. Radical changes must happen as the equal way of approaching the issue would put oneself stuck in the previous cycle with no critical view of oneself, an objective perspective. With the avenue of revolting one's original conviction, a new domain of likelihood would be opened, making oneself have a much more plausible sentiment. Besides, the initial route to approach the given situation would cause an _____ path to rise, and the passionately discovered way of managing the problem would enhance the malfunctioned principle.

- 1) obstructive
- 2) genuine
- 3) fortunate
- 4) radical
- 5) discernible

61.)

On account of the massive variation of communicating with individuals, mass society covered to fashion diverse ways of contacting each other, concerning social media. Penetrating this congestion would require comprehending skills about the depending condition of communicating effort above all, utilizing the comprehensive skills about embedded contacting avenues in precision. Reckoning the modern ways of communicating as a crucial state subject to the mass modernized condition would encompass the overall grasp at last as it would let oneself embrace the technologies in the state of the art or those up-to-the-minute, eventually making oneself an active agent for cutting-edge communicating technologies. Incessant interaction between two, or more would be in respect to the covering the right to express oneself as an active participant, having free will to converse about their states and positions about the status quo of the world, or even the smaller scales while it might be detrimental for one to be in the group. Entrusting the public with free will to speak for themselves is subject to the point of contact in the band they have belonged to. As it were, a highly progressed, yet distinctive platform to bring people together has been causing _____ effects.

- 1) comprehensive
- 2) subordinated
- 3) progressive
- 4) cultural
- 5) pervasive

62.)

Without constant supply of various concepts, we would likely be conservative agents to put off considering adopted options to be centered. Individuals having a range of views would induce themselves to acknowledge and seek for the status quo to be advanced. It is not to say that it would be the sole factor to lead them to have a wider perspective but to say that it is a cooperative factor that might be in a mutual interaction between the range of views and one's flexible _____ of the condition of the overall situation. In terms of being provided instant resources, individuals ought to perceive themselves in an objective view, trying to set apart the multifaceted characters in separate places, making room to enhance the chance of making pros and cons to a greater degree, with distinctive methods to address each other. Not only with being provided resources, but also due to the discrimination, we would have much higher possibilities to take what we sought.

- 1) operations
- 2) segregations
- 3) acknowledgements
- 4) managements
- 5) reasoning

63.)

At some point, humankind sought to ensure their preconceptions to be active when they ought to make proficient movements in the newly-faced problems. The double-edged sword would be in the respect to efficiency, as humans created a repetitive cycle of the benign, yet with the defective cycle as well. Previous experiences would be empowered one to form an organized concept or an idea that would bring about oneself to reconsider the diverse problems in multifaceted aspects. While it induces individuals to come up with plausible solutions, it also may be defective as it would possibly make oneself spend much more time analyzing the matter. As it were, individuals might have detrimental effects on their choices by weighing the pros and cons from the start repeatedly, eventually making the cycle benign to the defective as the overall efficiency would decrease. In terms of willingness to firmly standing opinions, individuals would not provoke themselves to feel a sense of skepticism, nor a sense of alertness, as they would be _____ to their previous decisions to consider the current in the same way as the precedented matters.

- 1) holding
- 2) conforming
- 3) accepting
- 4) tolerating
- 5) enduring

64.)

Variation of methods to persevere reformed the original construction of ways to withstand others' insulting words. To put it in a concise term, while people reciprocate the up-to-the-minute technologies, they got their morality devolved, hidden by the hindrance of so-called "anonymity." By imposing people to be stressed out, these days' conduct of afflicting individuals would be one of those main factors that have a crucial impact on inducing discord over each people. To make room for the place to have for their own's safety, individuals were on the threshold of being situated in emotional skepticism about themselves and aversing others. A marked contrast from those days when there were fewer participants on the internet, it became pervasive to make those harmed to be emigrant, longing for the ultimate stability which involves having numerous devices such as utilizing their habits to ease the indignation, to let themselves feel _____ overall.

- 1) compensated
- 2) humiliation
- 3) secure
- 4) stabilized
- 5) contradictory

65.)

Besides the fact that others' contempt would cause individuals in trouble, they would have to be aware of the successive, yet subsequent maintenance of their hatred that can eventually make oneself be in the skepticism. Set aside for the room of communication, they would likely put that the matters are all down to them, having a pessimistic view of themselves overall, with no leeway for others to be a problem that caused them to be so. The room consists of mutual devices that would let others who have a mutual interest to be communicating continuously with them, while it is true to be making distances from the others who have hatred with no specific reasons. Diverged from others, those who had been aggressed by them would put themselves into the safer domain. They would likely feel that their so-called friends would be considerate of having interconnected attitudes, ultimately making themselves feel that they got ensured their _____, with the aggressive to be gone. In terms of subsequent issues having their properties tied to others' attacks, they would remain closed to procrastinate communication with those who show aggressive manners.

- 1) security
- 2) conformity
- 3) individuality
- 4) characteristic
- 5) mutuality

66.)

A definite _____ between academic achievements and local competence exists, as the accomplishments outside the educational experience would be assessed with competence based on experiences. Not to say that curriculum has no virtue from a general perspective, but to put the educational deeds as subordinate since it would have no direct relevance to the actual accessibility to achievement outside the previous domains. To the extent of education, various subjects would make confusing moments to let oneself choose what they ought for but also to make himself skeptical for having innumerable works to do even before they had decided what to aspire for. Even not for the fact that it would put one to be frustrated, those subjects have little coherence to one's goal as those would have incompleteness in and of themselves and unilateral ways of implementation. It would be ideal to have oneself achieve what one had sought through utilizing what one had learned, while one would likely state it as a matter that should be reconsidered after all, as one knows that academic perspective and experiences would not have remarkable effects.

- 1) involvement
- 2) continuity
- 3) relatedness
- 4) void
- 5) subsequence

67.)

These days when scientific advancement renewed the record of history much more than ever before, came up to show somewhat ambivalent dynamics compared to the old days when it was different in terms of concession. A marked contrast from the old days, modern days would focus on having a rapid, yet massive amounts of materials, leading to a new chance to innovate the ineffective practices. Every innovation was enough to reform the convention, eventually fading the genuine beauty of humankind -humanity. The uncommonness of people with considerate manners has also become a matter of a double-edged sword that had risen above the surface. Though it could be said that calculative mind should be considered essential, it could also be stated that it could be considered _____. People seeking numerical returns with no considerate attitudes, it became ordinary to put them to be the ordinaries. To the extent of the overall societal aspect, it does no doubt to say that reciprocity got almost extinct which ultimately made everyone get on the infinite cycle of spending and earning with no warm-hearted minds. Individuals must be aware of the fact that besides rational thinking should take part, they should also be able to have themselves feel others from the perspective of humanity.

- 1) intrinsic
- 2) resultant
- 3) secondary
- 4) principal
- 5) independent

68.)

With the issue of excessive use of smartphones, we, as humankind, faced problems of _____, which cannot be called simple problems, but matters of intricate complexity. It would be a byproduct of digital advancement, thanks to the scientific research and hard work of engineers, while the problem would be likely to be put as misuse by individuals. Not only the matter of abusing smartphones but also could be explained in terms of a network. Active networks established in various fields, they have positive effects such as enabling individuals, or those institutions to have precise statistics, which can let the public have a much better resolution of their problems faced. But in case of misuse, innumerable amounts of properties got influenced, with distortion of the credibility of the institution. To a smaller extent, individuals might have overused to introduce countless diseases. It does no doubt to say that in terms of scientific, digital aspects, it caused dramatic effects to found a worldwide network, but in case of narrower views, such illnesses and avoiding oneself the institution to not let oneself be the credulous one would rather cause themselves to have a gap between the government and themselves, eventually making publics to be in further distances with the advent of smartphones.

- 1) diversification
- 2) division
- 3) intervention
- 4) interference
- 5) configuration

69.)

To find out a sensible path to go through the current hardship, our brains would likely put themselves in the cycle of recalling their previous decisions. Brains, facing the new impetus are likely to sort them out to intertwine, ultimately trying to come up with a solution for the current situation. In that case, individuals would overlap their preconceived notions to the present, trying to make it a connective thread. Individuals would modify only a few, or even bring them as they were in and of themselves. It does no doubt to say that it would be effective from an overall perspective, which also could be referred to as the term 'unavailable to be pioneers' as it would let them be in the cages they made. Without new external stimuli, they would not be able to come up with solutions next time when other new problems occur. To get out of this vicious cycle, one should be able to utilize the critical perspective about current one's mistakes of weaving the old ones and the present, which can be addressed by the example of individuals trying to see a new external impetus as a(n) _____ object.

- 1) dependent
- 2) separate
- 3) restrained
- 4) connected
- 5) subordinate

70.)

Altruistic behaviors toward others might lead to an impressive meeting moment by making both sides have positive attitudes kept persistent, while it would also make side-effects when one side has immoderate yielding behavior too on another, making both of them uncomfortable. To make the mutual relationship achieve what they sought, each side should have instant check-ups on their cooperator's emotional state as it would be one of the key factors to accomplishing the progressive movements. Not being too optimistic but also not being in a pessimistic view would prevent them to draw out an ineffective resolution to the facing problems as the term 'moderation' would best describe how to manage oneself to let both stand a chance to be ensured with success. The constant _____ of own's emotional movement might be required following the cooperator as it fashions consistent mutual respect.

- 1) limitation
- 2) management
- 3) resistance
- 4) immunity
- 5) progression

71.)

The remaining problem in these responsive working environments leads individuals have less room to be in the spaces all alone, and each person would have a hard time stimulating themselves to work. Few paths exist to make an efficient state, maximizing the efficacy though trivial things are hindering. Above all, every responsive problem would induce workers to seek _____ achievements, seemingly having a range of advantages over envisioning their routes. Rather than trying to visualize the accomplished, putting off the instant responsive check-ups, ultimately to make the dreams realized would have much more impressive, yet significant aspects. By fashioning so-called criteria through innumerable accumulated experiences, individuals would stand a chance to bring given problems to the realm of their standard -designed by themselves. Constantly expecting themselves that they can make achievements would be possible due to individuals involving the firm position about handling the issues and through the conscious attitudes toward managing themselves in the temptation of short-termed successes.

- 1) long termed
- 2) tempting
- 3) permanent
- 4) short termed
- 5) intriguing

72.)

Inner thoughts, overall, are hindered by common knowledge, which is fashioned by the gathered single knowledge. To be an active player in the endless improvement of collective perspective, we should be aware that significant progression in liberal arts took place to induce the development of common sense. Common sense, which illustrates the average knowledge of the public, has a far-reaching position in choosing what to do and how, etc. Thanks to the development of not only the liberal arts but also the major subjects, people have become able to consider how to manage themselves to prefer things that fit the collective wisdom. It might be a question that what kind of correlation between collective wisdom and liberal arts exists, but it does no doubt say that there is a definite relationship between them, as liberal arts form individuals' knowledge that eventually gathers around to make conventional wisdom. In the case of gathered senses becoming a common idea, while it would be efficient, it is still unknown if it would indicate the consciousness of each individual in precision. As to be an active agent seeking the natural perspective in and of itself, it would be crucial to have a wide range of visions that puts the individuals to an end in itself regardless of the common ideas, etc. In conclusion, while common knowledge is decisive, it should _____.

- 1) not override individuals' perspectives
- 2) ensure individuals to form collective wisdom
- 3) be related to the individual senses
- 4) not engage with liberal arts
- 5) be considered critical to the liberty

73.)

Gist oneself should know when having intense communication with others, that they should not simply conform to others while they should not also want others to conform to theirs as those and the others would rather stand against each other with the argument slowly becoming meaningless. Controversial issues would provoke people to go against each other, eventually inducing another new problem, besides having the original issues alone. When the arguments develop to make both too immersed in indignation, people would get out of the point to make the others accept their own opinions. What is the true virtue of arguing? Though individuals might be _____ their position, they should try to make a middle point with two opposites before it gets too polarized. It is not to say that ones should easily give up their choices but to say that ones should try to have intensified arguments without making them meaningless. Instead of making their voices get out the point, they should manage to be in the right places to make their voices come out, being aware of the moderate place to make their opinions and others' met in the right place.

- 1) unstable in
- 2) entrenched in
- 3) dislodged from
- 4) figuring out
- 5) accounting for

74.)

According to Winston Churchill, a pessimist sees the difficulty in every opportunity while an optimist sees the opportunity in every difficulty. It insists individuals have an optimistic view rather than a pessimistic view about every event, not to put themselves in the pit of negative feelings. These days, thanks to the advancement of the psychiatric field, individuals got able to know what were their problems and how to solve them by counseling with a psychiatrist or even using the Internet. However, in that case, people would also be aware of the additional information such as the name of the disease they are going through, which provokes them to search for it and fit them into the given symptoms. While it would have the advantage of making people aware of more precise aspects, they would conform to the disease. What makes the real problem is that individuals would likely put themselves to be lethargic, ultimately _____.

A marked contrast from those optimistic views, which makes themselves aware of the deeper pieces of information, yet unconscious of the bad aspect, those pessimistic would likely have a tough time getting over the problems. To overcome the problems they are facing, individuals should be able to filter and take it wisely the information they can get from the internet or wherever. Especially those information that induces each people to think of themselves as incompetent units should be ruled out.

- 1) pressuring themselves to overcome the disease
- 2) losing the strong desire to overcome the disease
- 3) expanding their original views to have a wider perspective
- 4) convincing themselves to be in a competent state
- 5) filtering the given information to reject what is not helpful

75.)

Procrastinating what ones should do, which is to say that, things would pile up to form massive schedules, namely, those that induce individuals to put them off repeatedly has certain subsequent issues as those tasks would lag the ultimate goal to be realized. In these modern days, with only a few exceptions, individuals are likely to be yielded to the congestion of their must-dos. To have refreshment over the vicious circle, they ought to seek a path to cut off one small task to be done, eventually standing a chance to make the larger scales of things to be conducted. In addition, though few people are trying to address their facing problems, it might also be said that they won't fully manage to cover those, as the problems they are about to handle would be suffused with the _____ that leads things to urgent situations, for present. The best case would be to have oneself manage the problem at the first glance, without hesitation of whether to put it as an issue for later or further.

- 1) earlier regulation
- 2) causal link
- 3) massive inconvenience
- 4) previous postponement
- 5) individual hardship

76.)

While individuals have a tough time getting over their creativity, they would find another path to reach the ultimate goal; ingenuity. It is a term that defines the ingenuine characteristic of individuals. Creating new plans, creating new objects, etc, are what is regarded as a road to originality, inducing others to recognize them as those who have inventiveness over their self-construction. Self-construction, which directly covers the term creativity, is a lifelong process of developing one's ingenuous features. Undergoing the massive influences of society, each individual is likely to be subjected to outer stimuli, which blend them into the flow of methodical features. It is not to say that individuals would be passive to the general wisdom but that it is a developmental process to make oneself part of societal creativity while having their characteristics not be directed to them. Utilizing self-reflection and other elements that include the room for having a process of guidance that leads to the eventual inventive state, is the optimal choice to _____.

- 1) convey the general wisdoms to oneself
- 2) put leeway to have themselves survive
- 3) create their group's originality
- 4) undergo tough times that makes individuals suffer
- 5) discover their own identities

77.)

In academic writing, it would be essential to have a formal tone, with plausible reasons to support the main idea. With an intriguing introduction, the writer starts the paragraph with coherent logic, with consistent effort to keep the style equal. Not too convoluted, but a thought-provoking passage would be the best one likely to be praised by the readers. To manage writers themselves to make the words cohesive, they should try to point out their ideas without logical errors, while handing out sensible reasons and examples with clear voices. Readers would have an altered perspective on the given material as they would be influenced by the writer's words. It might cause an issue since the readers would have no idea if the given definition of the material would be reasonable and makes sense with legitimate support. While there are various pieces with logical senses, there are also those that would blind the readers since the writers know that the readers would be passive when they read the article they wrote. Readers should have _____ views as there is a chance for the pieces to make misunderstandings about the material.

- 1) consistent
- 2) impartial
- 3) prudent
- 4) prejudiced
- 5) inflexible

78.)

Although having the power to manage time spent on impractical matters is a certain privilege for those present-day people living in a capitalism-based society, not all people are using the most efficient attitude overall, which makes it easy to see that those who would rather suffer from the pit of hard work than have themselves in the comfortable spaces are likely to have the competence over congestions. Seemingly all people have equal time, while the time itself goes differently. Paradoxically, those who have so many things to do, or those who are in the lower level -in general- stand a chance to fashion methods to overcome the facing problems, such as being chased by what they should have already submitted but to solve the problem with efforts, while for those who have relatively sufficient time, or those who are in the higher level, are likely to say that they have higher chances to _____. Those who had already taken over the higher places than others have leisure only for the hindrance of success such as extravagances and gratifications. To the extent of self-management, it is time to be rated in the highest position above other factors to cultivate an impressive persona. No direct connection seems to be between time and having an impression on the public, while there is a disproportionate correlation between time and higher chances to manage oneself.

- 1) avoid difficulties during congestions
- 2) spend time for themselves
- 3) play crucial roles in the specific time
- 4) manage themselves to be impressive
- 5) stay in the successful time

79.)

In retrospect in the early stages of socialization, individuals were counting on others to go along with them as they had no idea about the common framework that entails the need to induce individuals to unify. Needless to say, everyone goes through those phases when they have a hard time getting over their obstinate refusal to embrace uneasiness. To regard others as an undeniably important factor when they have to judge how to behave toward others, in the commonly defined sensible manners, they must take their attitude widely open toward the so-called plausible perspective -in terms of individuals. The group's paradigm contains widely applicable norms such as how to act when others approach, greet others in the first meeting, etc. It seemingly has a compulsory manner to make uniformity across society, while it also seems to present individuals to conform to the collective cognitive structure. To the extent of individuals, they would not perceive what they are truly is since they are continuously influenced by the massive logic of the group. True nature, after the early stages are completed, is considered a matter that is inherently _____ to define in and of itself.

- 1) disrupted
- 2) integrated
- 3) convoluted
- 4) imposed
- 5) connected

80.)

Fulfilling responsibility has momentous implications for the level of comprehensive ability across an extensive range of educational settings. Completing tasks from the previous session directs students to become immersed in the present, or further discussions. Proficient participants have ease in penetrating the main idea and other details while they can also deliver their thoughts even with the complex matters though they did not preview what they would acquire next time to have at least reviewed those covered materials. What puts them at the sophisticated level is those that seemingly have minor effects on overall grasp, which eventually induces individuals to be less aware of the decisive factor, industriousness. It might draw out a tough time working on their jobs but have rewarding aspects, ultimately gratifying themselves with successful management. It does no doubt considering those things to be perceived in a sensible manner as an obligation is what concerns the integral state over the intricate dynamics of the conference, with academic purposes. In other words, the accountability of managing themselves to _____ about problems remains crucial.

- 1) facilitate the efficacy
- 2) renounce their opinions
- 3) regulate the activities
- 4) have persistent doubt
- 5) establish the regulatory norms

81.)

If the ones were likely to have a hard time interpreting the situation with their manuals, the preconceived notions are what provoke them to remind of various manners to address the case before they perceive the lack of their grasp, operating in the process of _____ the experiences and newly embraced knowledge. When individuals are demanded to stimulate their framework to engage with the materials, the cognitive structure takes the stimuli into the process of reconstitution since each people cannot define the materials in and of themselves as their views are already influenced by numerous experiences. Unique views of each people are fashioned in distinctive ways compared to each other since how the perceptual system that has something to do with shaping the given material, applies to the world and how it is defined by individuals differs. The given situation can be challenging for the participants to comprehend from a wide range of perspectives, eventually inducing them to utilize the existing paradigm regarding general efficacy. Undergoing the process of redefining the event, they stand a higher chance to approach the ultimate goal; prompt, yet precise. To get the right idea that goes along with the original perspective, the definition of the problem changes to fit the context of their norms.

- 1) redefining
- 2) perceiving
- 3) accepting
- 4) intertwining
- 5) understanding

82.)

Individuals confronting a chance to meet their inherent desire to learn and confirm what they hoped to insist that though there would not be a significant signal inducing the newly-faced aspect to be widely embraced, they are likely to have already fashioned the notion that goes along with their preconceived model at the first glance that encompasses beyond the boundary of perceptual structure when each person would prefer to draw out meaningful insight that directs individuals to penetrate the obscure domain of the true nature for humans in consistency. The framework, which is an instrument that helps people to perceive the world as it truly is from the individuals' perspective is characterized by intertwining the previous events and the subsequent events into one, or multiple concepts to generate a new cognitive complex based on the existing notion. It fits the particular unit distinctively since the experiences and hardships each go through are unique. While some people might assume that it is prone to be stuck in the past times, the paradigm supports individuals to _____ their views with constant updates. A marked contrast from the stereotype, which accounts for the persistence of the defective, or obsolete collective wisdom, the individual cognitive system would release the old-fashioned to commence amended form.

- 1) idolize
- 2) form
- 3) regulate
- 4) maintain
- 5) perceive

83.)

A progressive policy with a collective framework that discounts minorities tends to induce breakup in society. Obsessed with the spread of prosperity, freedom has degenerated in the discriminating interaction of societal agreement. Collective wisdom targets most people to blend into the shared idea without respect for those assumed to have no crucial roles in the decision-making process. Participating in the process of addressing critical factors that directly influence the overall atmosphere of the group leads to the ultimate confusion about the vision in case of excluding non-dominant groups. The basis of the prevalent notion in the group stems from the need to integrate various opinions into common sense. With the development of measures to be conscious of what the ordinaries prioritize, the shared framework evolved to play a significant role in giving shape to general opinions. As the world heads toward the congestion of inner conflicts, the advancement of means to collect what citizenry makes voices for _____.

- 1) demonstrates how hierarchism got formed
- 2) induces new kind of problem
- 3) illustrates how discord forms
- 4) prevents division of groups
- 5) reveals the paradox of integration

84.)

Recently, social media became to be considered a decisive factor in our lives, mostly in education. In terms of schooling, most institutions utilize social media to find resources for learning in which technology can play a role to increase the effective learning process. The use of social networking in education, coupled with face-to-face engagement, can enable greater comprehensive levels for learners, although the role of teachers needs to be well supported to develop successful digital pedagogies. Not only for teachers but also for learners, the critical point is that the probability of both successful teaching and learning is dominated by _____. To the extent of learners, sometimes some students misuse the internet because they want to connect to other sources such as games, and comments from friends which don't directly concern the academic process. With respect to the teachers, those who have a lower possibility of being accustomed to cutting-edge technology, the educators or lecturers have a tough time using the internet, especially social media. Many students rely on the accessibility of information on social media and the web, in general, to provide answers, while students themselves have to be aware of the fact that there always exists a chance to misunderstand social media as the true means for education.

- 1) moderation
- 2) proficiency
- 3) credibility
- 4) interrelatedness
- 5) accessibility

-reference)

85.)	<Answer>
Dreams or goals are known to be effective, yet, it should not be ignored that it is _____ since they are decisive factors in individuals' envisioning process. Hopes are fashioned through numerous experiences and an individual's subjective point of view; therefore, it is inevitable for the ideals to have distance from others. Others would have gone through different events, leading them to form a unique vision of their dreams, and slightly reluctant views upon others to make negative voices on the different dreams as the experiences they've undergone would not fit into those of others. Though the ideals and future hopes might have some similar connective aspects, it does no doubt to consider that each person should have formed distinctive perspectives. Others' judgment over one's idea is impartial as the basis for judgment forms in distance with every particular. To the extent of individuals, the dreams are ideal and unreal, unknown of their likelihood before it gets realized, at last. The gap between the present and the uncertain future would not allow each people to manage the possibility of being frustrated prudently. However, it is still crucial not to abandon dreams as it would be an impetus for stimulating oneself to accelerate for their dreams.	23122 15321 43251 11121 12132 32132 22131 42132 51413 22134 12343 11341 22131 43222 41224
1) pessimistic	23235
2) unbiased	44345
3) optimistic	
4) essential	
5) ambivalent
